## Innovative Services, Leading-Edge Technology Ensure Effective Solutions for Communications

For more than 104 years, Ironton Telephone Company and its subsidiaries have been serving the Lehigh Valley community and its businesses with best-of-breed telecommunication equipment and services. From the first telephone pole to the latest and most advanced cloud-based communication products, Ironton Telephone's goal has been to deliver service excellence to its customers, all while providing a stable work environment to its employees, and continuing in that tradition for more than a century. Today, it remains privately owned and in the George family. Lately, Ironton Telephone Company has expanded its footprint and offerings by creating subsidiaries such as Ironton Global. The latter brings a broad portfolio of enhanced IP-based phone, trunking, conferencing, E-faxing and online prepaid calling applications ([www.relyz.com](http://www.relyz.com)) to businesses of all sizes. Integrating sophisticated best-of-breed TDM and SIP-based network platforms on private IP connections to strategic carrier partners, Ironton Telephone Company and Ironton Global services are guaranteed to deliver superior voice communication performance and a premium customer service experience. Financially stable and profitable, Ironton Telephone and its partnerships (such as with PenTelData, Service Electric Cable TV, Service Electric Cablevision, Service Electric Broadband Cable, Adams Cable and Beaver Valley Cable) can provide best-in-class television programming (through its cable TV service), telephone service (to the home or the office), and of course, blazing-fast Internet speeds, all with reliability and uncompromising uptime with uncommon service excellence. We were also one of the first companies to offer HBO to the home, as well as touchtone service in the Lehigh Valley.

Ironton Global has lately extended many of these services by delivering nearly anywhere in the U.S. and Canada its business-class SIP trunks, as well as feature-rich hosted telephony services. They bring to businesses effortless communications with quick setup, turnaround and high availability without the expensive capital expenditure that traditional systems demand. Ironton Telephone Company is a facilities-based company with TDM and VoIP technologies, and has its own number resources and does its own porting, which largely improves customer reliability. We maintain numerous business relationships and connections with many of the large carriers such

as AT&T, Verizon, Comcast, Windstream and many others. Since we own our own switches (TDM and IP), we are able to control the quality of delivery, as well as quality of service to just about any endpoint with unequalled reliability and uptime. Our bilingual customer care center is always available to help and can provide technical assistance at any time of day or night.

Indeed, Ironton Telephone Company has grown significantly in size and in technology to embrace modern technological breakthroughs, but one thing that will never change is our strong unwavering commitment to our clients and our community. For more information, call us anytime at 610-799-3131. ■
